

GGT BUTTERFLY MATS

Our GGT Butterfly Mats are a state of the art product that will completely revolutionize the way that you install your GGT surfaces. With its innovative interlocking tongue and groove design, it brings a new level of efficiency to installing a new arena base. Not only does it provide stability and drainage, but it can also reduce the amount of footing necessary.

- Reduce the amount of footing needed.
- Minimize headache in setting up a base layer & drainage system.
- Helps with drainage, water retention & stability.
- Interlocking tongue & groove system for easy installation.

GGT Butterfly Mats™. The red marked areas are the Butterfly, holding the water and sand. Blue marked areas are considered knobs and lug treads; they hold footing and prevent footing movement. The yellow marked areas are the tongue and groove; these interlock them, preventing the mats from drifting. The green marked areas are drainage holes to keep the footing at the optimal moisture content level.
